DESCRIPTORS: *Diagnosis, *Mathematical models, Medical examination, Psychiatry, Diseases, Medical personnel

Clinical diagnosis of psychiatric diseases is treated mathematically by assigning values to the patient's symptoms or complaints. The examiner assigns value-coefficients to the symptoms according to the disease which they indicate; i.e., symptom A may be more important in disease S than in disease T. If disease S which also includes symptoms B and C is indicated, the examiner next looks for symptoms B and C. Symptoms (Biological Sciences--Neurology and Psychiatry, TT, (over)
